Submitted in partial fulfillment of the
requirements for the degree of

MASTER OF SCIENCE IN INFORMATION SYSTEMS

from the

NAVAL POSTGRADUATE SCHOOL
March 1986

ABSTRACT

This thesis documents the mechanization of Computer Systems Management course selection and scheduling. It examines the factors that complicate academic scheduling and reviews the major problems associated with the current system.

Alternative decision support system techniques to consolidate and integrate scheduling data were examined for potential implementation problems. Solutions to those problems became design objectives. The scheduling software was developed using the software engineering methodology. A prototype program was distributed to selected users and the final program was modified based on their feedback.

The program custodian should control the program by making it available through a centralized media such as an electronic bulletin board. Future enhancements to this program should include expansion of the database, conversion to a database language and development of a microcomputer version.

TABLE OF CONTENTS

I. INTRODUCTION

A. BACKGROUND

The mission of the Naval Postgraduate School (NPS) is "to conduct and direct the advanced education of commissioned officers, and to provide other technical instruction to meet the needs of the naval service." Consequently, the Superintendent confers Bachelor's, Master's, Engineer's or Doctor's degrees on qualified graduates. The Superintendent's authority is subject to Navy regulations and is contingent on curricula accreditation.

The school's unique mission requires that curricula design be approved by both the academic community and the military/user community. The academic community sanctifies the educational structure and content through curricula accreditation.

The school meets military/user requirements for curricula design through an evolutionary process. NPS faculty and staff are in continual contact with curriculum sponsors and end users. Sponsors include such organizations as Naval Data Automation Command, Naval Supply Systems Command, Naval Telecommunications Command, and United States Marine Corps Headquarters. The NPS faculty and staff consolidate the information derived from these contacts and generate curriculum skill requirements. (see Appendix A) The Naval Postgraduate School conducts a bi-annual curriculum review to evaluate the relationship between the available courses and the skill requirements. The final products of this review are the matrix of required courses, a list of approved electives, and the design of alternative emphasis area structures for the curriculum in question.

The academic departments use the matrix of required courses to schedule classes for all new incoming students.

This provides a standard instructional package within each curriculum. Within the CSM curriculum, there are only two instances where students may modify or add to the standard matrix. The first is through course validation. If students pass validation examinations, they are exempt from having to take the validated course. Nevertheless, they must schedule another course in its place. The validated course counts as a prerequisite for future courses and towards all other graduation requirements.

The second instance when students may deviate from the standard course matrix is through the selection of emphasis area courses. At the beginning of their second term, all CSM students must choose one of four CSM emphasis areas. They must then select and schedule courses that are encompassed in that area. The selected courses must be tentatively scheduled to fill open matrix slots in the next four academic quarters.

B. SCHEDULING

It is difficult to make realistic scheduling projections for one overriding reason. The Naval Postgraduate School attempts to let student desires drive the selection of courses offered. Therefor, the academic departments ask students to project a schedule of desired courses. Students are often notified that the school will not offer their selected courses. Then the selection/scheduling process begins again.

The student is free to choose from any discipline in scheduling a course for replacement of one validated. By scheduling wisely, the student can use this opportunity to meet prerequisites to expand future course selection options. Wise scheduling requires research.

In scheduling courses for emphasis area requirements, the student must consider several things. Does the course fulfill the appropriate emphasis area requirement? Has the

student met all prerequisites for the selected course? Will the school teach the course in the desired academic quarter? Does the course fulfill other graduation requirements? Answering these questions also requires research.

Where can the student go for the answers to these questions? The "course catalog" contains information about the course title, description, department, hours and prerequisites. The "tentative course offerings manual" (and I emphasize tentative) tells the student when the school expects to teach the course. CSM curriculum Memo of 25 June 1985 outlines emphasis area descriptions and course options. Finally, periodic memos from department chairmen notify students of actual course offering times.

Interviews with CSM students (PL-51 & PL-53) reinforced my contention that the scheduling procedure has several major flaws.

1. the process contains too many different sources for data research.
2. the process is more time consuming than necessary.
3. the process is more complicated than necessary.
4. there is insufficient advanced information provided to make sound decisions.

There are several potential solutions to these problems.

1. cease course validation.
2. establish a standard matrix of required courses per emphasis area.
3. departments could conduct more advanced scheduling of courses.
4. consolidate all required research data into one source.
5. mechanize the entire scheduling process.

The first two solutions are unacceptable according to NPS policy. Academic departments must allow students to validate courses to prevent educational repetition and to exploit individual talents and interests.

The third potential solution is desirable but is not always achieveable. Flexibility is required as a result of students' changing desires. Furthermore, this is a partial solution at best. The school could implement the fourth possibility via manual or mechanized media and thereby help students tremendously. Again, this is a partial solution.

The fifth possibility holds the most promise in that it would incorporate #3 and #4 and could go a step further. It would combine the raw research data with manipulated data and put that information in a format to aid decision making. And it could put that information at the student's fingertips thereby reducing research time and complexity. This thesis will pursue the mechanization solution.

C. THESIS OUTLINE

Chapter 2 will examine the characteristics of decision support systems to identify desirable features for a mechanized scheduling system. It will also examine software design techniques to identify the most appropriate methodology for this problem.

Chapter 3 will discuss the selected design approach in detail. It will address the systematic application of design techniques through each step in the software development process.

Chapter 4 will address the implementation of the completed software package and will outline the feedback received from users. This chapter will also indicate program modifications made as a result of the feedback.

Chapter 5 will draw conclusions and provide recommendations regarding academic scheduling and software design.

II. DECISION SUPPORT SYSTEMS

Keen and Wagner [Ref. 1] define a decision support system (DSS) as a computer-based system which managers use personally on an on-going basis in direct support of their managerial activities. They go on to discuss the capabilities that a DSS must have. It must be able to reflect the way a manager thinks. It must be flexible and adaptive through ease of modification. It must support managers in a complex process of exploration and learning. Finally, it must evolve to meet changing needs, knowledge and situations. The goal of a DSS is to provide the user with a tool that meshes with the users own decision making process. The means to achieve that goal is whatever software and hardware tools are suitable and available.

These desirable capabilities translate into some specific design criteria.

1. flexibility.
2. architecture that allows quick and easy extensions and alterations.
3. interface that buffers the user from the computer.
4. communicative display devices (interactive).

With any system there is a tradeoff between power and ease of use. The proposed scheduling system will have a tight structure that is easy to use in solving specific problems. This will limit the system flexibility but will enhance the system friendliness. This is an acceptable tradeoff. Students will use this program for less than one year. Therefor the program must be easy to use but will not require the high degree of flexibility needed in on-going use Decision Support Systems. Nevertheless, adaptability will be a development consideration and will be achieved through structured design and extensive documentation.

Steven Alter [Ref. 2] places mechanized decision support systems in seven categories:

	NAME	PURPOSE	ORIENTATION
1)	File Drawer	data retrieval	data
2)	Data Analysis	retrieval/analysis	data
3)	Analysis Information	data analysis	data
4)	Accounting Models	simulation	model
5)	Representational	simulation	model
6)	Optimization Models	suggestion	model
7)	Suggestion Models	suggestion	model

File drawer systems provide on-line access to particular data items whereas data analysis systems analyze data files. The problem of mechanizing a scheduling system falls between these two categories. Scheduling requires a large database of information for review and manipulation during decision making. Because of this manipulation, I position the solution model in the data analysis group.

Data analysis systems can be further subdivided into tailored and generalized categories. Tailored systems provide specific analysis functions for definite tasks. Generalized systems provide the ability to perform wide ranging database analysis and produce simple models. Although mechanization of scheduling will provide general review of the database, the solution model more appropriatly falls into the tailored category because of its narrow functional scope.

Alter lists several problems associated with development and implementation of data analysis systems. I consider three to be of critical importance. The first is the unfreezing of job image and the way of approaching problems. All people concerned with current scheduling practices have become accustomed to its manual orientation. Furthermore, most new students are intimidated by the computer. This

must be overcome if a mechanized system is to be effective. The system must be user friendly, it must meet all scheduling needs and it must provide more information than was previously available.

The second area of concern is technical in nature but relates directly to the first problem: retrieval flexibility. The system must be capable of showing a broad range of data but it must also provide a measure of power in manipulating that data. The system must be flexible enough to allow the user to easily perform realistic operations.

The third area of concern deals with user motivation and training. Can potential users figure out what to do with the system? This can be assured with training and strategic timing of system introduction.

A fourth area of concern, not discussed by Alter, is system maintenance. Currency of data is critical. If the system does not provide up-to-date information to users, the students will quickly discard the system. This can be overcome by making the system easily maintainable through proper design, extensive documentation and by limiting the factors that will require change.

The scheduling problems can be solved through mechanization. Nevertheless, the system design must deal with the potential problems discussed above to improve the likelihood of successful implementation.

III. SOFTWARE DESIGN

A. GENERAL

Roger Pressman [Ref. 3] discusses several problems associated with software development. He contends that poor up-front definition is the major cause of software development failure. A detailed statement of function, performance, interfaces, design constraints and validation criteria is critical. According to Deutsch [Ref. 4], early specification of software design objectives increases the overall effectiveness and efficiency of the programming function. Furthermore, it not only reduces the amount of changes required but it identifies the changes earlier in the software lifecycle when they are less costly and disruptive. Pressman also contends that documentation forms the foundation for successful development and provides guidance for effective software maintenance.

Pressman recommends the software engineering methodology as an application-independent technique for software implementation of a problem solution. The objective of software engineering is to establish a set of software components that document each step in the lifecycle. This methodology provides a set of milestones that designers can review at regular intervals throughout the software lifecycle.

The software lifecycle consists of three phases: planning, development, and maintenance. Software engineering addresses specific tasks that designers must accomplish during these phases. During the planning phase, the developer defines the scope of the problem, predicts resource requirements, establishes cost and schedule estimates, and analyzes and defines performance requirements. During the development phase, the developer translates the requirements into software through design, code and test techniques.

Finally during the maintenance phase, appropriate systems personnel take action to correct and prevent software errors, to adapt the software to its changing environment and to perfect the funtional capability of the software.

This thesis will follow the software engineering methodology to accomplish the implementation of the NPS scheduling solution.

B. PLANNING PHASE

Software planning is the first step in the planning phase of the software engineering process. It combines research and estimation to provide the developer with an understanding of the scope of the work, the required resources, the expected cost and effort, [Ref. 5] and the proposed schedule. The Software Plan covers these topics in detail. (see Appendix B)

The next step in the planning phase is Requirements Analysis. This step provides a foundation for software development by describing the flow and structure of information. It also identifies interface details, design constraints and validation requirements. These topics are discussed in detail in the Software Requirements Specification which consists of a data flow diagram (Appendix C), a data dictionary (Appendix D), and a preliminary users guide (Appendix E).

C. DEVELOPMENT PHASE

The development phase translates the set of requirements into an operational system called software. The first step in the development phase is Design. Designers destribute software control by factoring the Data Flow Diagram. They partition it into reception paths, transaction centers and action paths. Then they evaluate each action path for its individual flow characteristics. Next, the designers map the Data Flow Diagram into a software structure amenable to

transaction processing. They develop a modular structure, define interfaces, and establisha data structure. Design documentation consists of the structure chart (Appendix F) and the related module descriptions (Appendix G).

The second step in the development phase is Coding. Programmers translate the module specifications into an appropriate progamming language. A Program Listing displays the software code (see Appendix H).

Testing is the final step in the development phase. It consists of three parts: unit testing, integration testing, and validation testing. Unit testing attempts to validate the functional performance of an individual modular component of software. Integration testing looks at functions and interfaces to provide a means of assembling the software modules. Validation testing ensures that the program meets all software requirements. Top down/incremental integration combines these three parts into one testing method. The Integration Test Specification discusses this testing methodology in detail (Appendix I).

D. MAINTENANCE PHASE

Maintenance is the final phase of the software lifecycle. A goal of the software engineering methodology is to reduce the amount of effort that will have to be expended on maintenance. Developers accomplish this by designing a program for change and by having the planning and design documentation readily available.

Designing a program for change includes several things. Documentation must be complete and understanable. Module cohesion must be high to ensure relative functional strength. Module coupling must be low to ensure relative functional independence.

To aid in program maintenance, we have developed a seperate maintenance manual (see Appendix J). This manual will direct the program maintainer in making simple but

necessary updates. The total compliment of design documentation will be a valuable tool in keeping the SKEDULER program operational and up-to-date.

IV. IMPLEMENTATION, FEEDBACK & MODIFICATIONS

A. PROTOTYPE RELEASE

During june 1985 we sent preliminary copies of the SKEDULER program to ten potential users for review and comment. These users included 3 professors, 1 curricular officer, and 6 CSM students. As a result of their comments, we modified the program in the following areas:

1. menu formatting.
2. information display content & formatting.
3. screen paging.
4. addition of course names.
5. add the ability to overlay a course within the Add_A_Course module instead of having to go to the Drop_A_Course module.
6. add the ability to add a course even when the data base shows it is not offered.
7. improve the Guidance module (more data).
8. show courses validated at the end of the validate procedure as well as during the schedule update.

B. INITIAL IMPLEMENTATION

On 15 July 1985 we sent the SKEDULER program to 26 students in the PL-53 CSM class for use in the selection of emphasis area courses. We also sent it to another professor and a PL-51 student for review and comment. The feedback from the users indicated a time savings of 25 to 50% over the manual system of course scheduling. Nevertheless, they were not completely satisfied with the program. The combined feedback from the users and reviewers resulted in the following program changes:

1. addition of course descriptions
2. reformatting of the updated schedule display
3. addition of the ability to list and add courses from within the emphasis area selection module instead of

having to return to the main menu and select those options seperately

C. PROGRAM REVIEW

On 16 October 1985 review of the structure chart revealed several module cohesion and coupling design flaws. To correct those problems, we made the following program changes:

1. We removed a seperate module to convert lower case input to upper case input We then inserted the conversion function directly in the appropriate modules (i.e., Add_A_Course, Drop_A_Course, Validate, Listind, Describe). This change simultaneously reduced module coupling and increased module cohesion.

2. We removed a seperate module to check the status of required course scheduling. We then inserted the status check function directly in the Update_Show module. Again, this improved both cohesion and coupling characteristics.

3. We inserted the Pick_A_New_Term module into the Add_A_Course module. This was done because the Add module was the sole user of the Pick module.

4. We deleted the Show_Validated_Courses module and inserted its function directly into the Validate and Update_Show modules. This was done to improve both cohesion and coupling.

V. CONCLUSIONS AND RECOMMENDATIONS

A. CONCLUSIONS

1. Software Engineering

The software engineering approach is extremely valuable and effective. This systematic development methodology improves system quality and maintainability and enhances program control. It requires up-front planning that pays off over the life of the program by reducing and simplifying maintenance.

2. The Skeduler Program

Writing the SKEDULER program in a database language would have made both the code and the data easier to maintain. Programming inexperience prevented that approach.

User feedback has shown that the consolidation of information provided by SKEDULER is useful in academic scheduling. Users estimate a time savings of up to 50% over the manual system.

The key to the success of SKEDULER will be its maintenance and continual update. Estimated maintenance effort is only 8 hours per academic quarter (see Appendix B). Neglecting that effort will quickly render SKEDULER obsolete.

Users were disappointed in not being able to add courses that were not listed in the data base. The courses resident in SKEDULER include required courses, emphasis area courses, and all prerequisites for required and emphasis area courses. These catagories will suffice for the majority of students however many students need more options especially if they have validated several required courses. The problem with adding courses not listed in the data base is that a complete set of information related to the course must be resident in the data base to make all SKEDULER

functions completely operational. Nevertheless, this problem must be overcome to make SKEDULER more usable.

Limitations in PASCAL as well as in terminal orientation cause formatting problems when adding new information to the data base. This problem can be overcome by carefully following maintenance instructions during data base update. (see Appendix J)

B. RECOMMENDATIONS

1. Software Engineering

We recommend this methodology for all programs with other than a single use requirement.

2. The Skeduler Program

Implementation will be most effective if the curricular officer posts a precompiled read-only copy of the SKEDULER program on an electronic bulletin board. All CSM system users will have access the bulletin board. This will save space on the users A-disk (the program uses 257K bytes of storage or 15.4% of an A-disk) without reducing access to the program. This will also centralize the program for maintenance and update.

Early maintenance of the program should include an increase in the number of courses listed in the data base. This will eliminate the need for adding courses not listed although it will require more disk storage space. Additions should include the most popular courses from the CS, IS and MN catagories.

Regular program maintenance according to published instructions is essential. This must be done to prevent program obsolesence.

Future adaptations of this program should include conversion to a database language. Furthermore, it might be useful to develop a microcomputer version of the program.

Finally, the SKEDULER program could be integrated with the NPS schedule control system so that SKEDULER output could be electronically transmitted to the Registrar for use in developing the NPS master schedule. Collection and integration of data could be accomplished via spooling.

APPENDIX A

EDUCATIONAL SKILL REQUIREMENTS FOR COMPUTER SYSTEM SUBSPECIALTIES

All officers with advanced degree education in computer systems must possess skills and competencies in Automated Data Processing (ADP) management, computer systems hardware and software, financial and resource allocation management, manpower-personnel management, ADP acquisition management, organization design, and systems analysis and design. Furthermore, the officers must be able to apply these skills to the development, management, and utilization of Department of Defense information systems. These skills and competencies are detailed below.

1. The officer must have a thorough knowledge of ADP management theory and practice to include:

   a. ADP feasibility studies including economic analysis, auditing, and the selection, evaluation, acquisition, installation and effective utilization of ADP hardware and software.

   b. Computer center facilities planning, production planning and control, system performance evaluation, manpower requirements determination, personnel management, budgeting and financial control, organization design, and security.

   c. The process of Navy Department, Defense Department, and congressional decision making on Automated Data Processing matters.

   d. The ability to plan and implement a major programming project.

   e. The planning, controlling and directing of scarce resources and multiple, time-constrained goals while confronted with high technological change.

2. The officer must have a thorough knowledge of computer hardware and software to include:

   a. Basic components of a computer system and their patterns of configuration and communication.

b. An ability to program in COBOL a defined problem and provide the necessary documentation of that program along with an associated minimum knowledge of FORTRAN or PASCAL.

c. The characteristics, effectiveness and system economics of various Navy, Department of Defense and civilian computer-communication networks and services, local networks, and distributed computer systems including real-time considerations.

d. The use of computer-aided software development, documentation and testing facilities.

e. An understanding of technological change, its forecasting and impact on policy and practice.

3. The officer must have skills and competencies related to information systems including:

a. The ability to perform a systems analysis and design for moderately complicated information systems and in this process to utilize a system or software development methodology.

b. The ability to obtain compatibility between information system and organizational design.

c. The ability to use the information system as the integrating tool to provide decision support systems for Navy and Department of Defense management.

d. The ability to distinguish requirements for computer-based versus non computer-based information system applications.

e. The ability to define and implement physical as well as data security and privacy measures for a computerinstallation.

f. The ability to apply database systems or file processing systems as required by application.

g. The ability to organize and manage a post-installation computer performance monitoring evaluation optimization program.

APPENDIX B

THE SOFTWARE PLAN

1.0 SCOPE

1.1 PROJECT OBJECTIVE: Create an interactive, terminal oriented, menu driven program that will allow CSM students to modify their academic schedules with minimal need to consult hard copy documentation.

1.2 MAJOR FUNCTIONS

1.2.1 Main Menu Transaction Dispatcher

1.2.2 Prerequisite Check

1.2.3 Validate Courses

1.2.4 Add Courses

1.2.5 Drop Courses

1.2.6 Select An Emphasis Area

1.2.7 List Courses

1.2.8 Update Schedule

1.2.9 Minimum Requirement Fulfillment Status

1.3 OTHER CHARACTERISTICS

1.3.1 Interface: The software must be developed to be compiled and executed on the NPS IBM 3033.

1.4 DEVELOPMENT SCENARIO

1.4.1 Develop the Software Plan

1.4.2 Prepare the Preliminary Users Guide

1.4.3 Develop Dataflow Diagram

1.4.4 Prepare Data Dictionary

1.4.5 Develop Structure Chart (Constantine method)

1.4.6 Develop Module Specifications

1.4.7 Code

1.4.8 Develop Test Specifications

1.4.9 Prepare Maintenance Manual

2.0 RESOURCES

2.1 HUMAN RESOURCES

2.1.1 Consultation

2.1.1.1 Prof Lyons

2.1.1.2 Prof Spencer

2.1.1.3 Prof Schneidewind

2.1.1.4 Cmdr Anderson

2.1.1.5 Cmdr Rautenberg

2.1.2 Design & Programming

2.1.2.1 Capt S. M. Fenstermacher

2.2 HARDWARE RESOURCES

2.2.1 Development System: IBM 3033 accessed via IBM 3278

2.2.2 Target Machine : same as above

2.2.3 Usage Requirements: intermittent development usage

2.2.4 Limitations : 1 megabyte of storage

2.3 SOFTWARE RESOURCES

2.3.1 Support

2.3.1.1 VM/CMS

2.3.1.2 Waterloo Pascal

2.3.1.3 XEDIT

2.3.1.4 Waterloo Script

2.3.2 Utility

2.3.2.1 Personal library of functions and procedures

2.3.2.2 NPS Catalog

2.3.2.3 Tentative Course Schedule

2.3.2.4 Skill Requirements

2.4 AVAILABILITY WINDOWS (no restrictions anticipated)

3.0 COST/EFFORT (using BASIC COCOMO Model)

3.1 GENERAL - The Constructive Cost Model (COCOMO) is designed for quick, early, rough order of magnitude estimates of software cost, effort, and schedule. There are three levels of the COCOMO model: basic, intermediate and detailed. The basic model is applicable to small-to-medium size products developed in a familiar in-house development environment. Because these are the characteristics of the SKEDULER project, the Basic COCOMO Model will be used.

3.2 COMPUTATIONS

3.2.1 Assumptions

3.2.1.1 Mode = Organic

3.2.1.2 KDSI = 3000 (program = 2500 / database = 500)

3.2.2 Development Effort <(MM)d>

3.2.2.1 Basic Equation: $(MM)d = 2.4(KDSI)^{**}1.05$

3.2.2.2 "SKEDULER" : $(MM)d = 2.4(3)^{**}1.05$

$= 2.4(3.1694019)$

$= 7.6065646 = 7.6$ MM

3.2.3 Annual Software Maintenance <(MM)am>

3.2.3.1 Basic Equation: $(MM)am = 1.0(ACT)(MM)d$

3.2.3.2 ACT (Annual Change Traffic): The fraction of the software product's source instructions which undergo change during a (typical) year, either addition or modification.
<(DSI added + DSI modified)/ Total Project DSI>

3.2.3.3 Annual Maintenance Effort for "SKEDULER"-

		DSI	
Database:	Additions	20	
	Modifications	50	
Program :	Additions	0	
	Modifications	10	
		80	TOTAL

ACT = 80/3000 = .0266667 = .027

(MM)am = 1.0(ACT)(MM)d = 1(.027)(7.6 MM) = .2052 MM

Conversions: to MAN DAYS = MM x 19
to MAN HOURS= MM x 152

(.2052 MM)(19) = 3.9 MD (1 day/term)
(.2052 MM)(152)= 31 MH (8 hrs/term)

DATA DICTIONARY

INDEX:

Note: dictionary entries are in alphabetical order within each catagory

****

DATA SOURCES:

1. INPUT FILE - called at the start of program execution ("LOAD DATABASE PROCEDURE" - see transforms) to load the "DATABASE" (see info stores) with the following course information:

A) SET 1 - COURSE DATA (FIRST 57 ENTRIES)

COL(S)	CONTENTS	
1- 2	COURSE ID	
4- 7	COURSE NUMBER	
9	HOURS	
11	TERM ASSIGNED	(PRESET SCHEDULE)
		(= ACTUAL TERM PLUS 1)
		(1 = VALIDATED)
13-14	CURRICULUM	
16-17	PREREQUISITE #1 -	COURSE ID
19-23		COURSE NUMBER

```
24-25   PREREQUISITE #2 - COURSE ID
27-30                     COURSE NUMBER
32-33   PREREQUISITE #3 - COURSE ID
35-38                     COURSE NUMBER
40-41   PREREQUISITE #4 - COURSE ID
43-46                     COURSE NUMBER
   48   REQUIRED COURSE CODE (1 = YES / 0 = NO)
   50   OFFERED IN THE: FALL (1 = YES / 0 = NO)
   52                   WINTER (  "   /   "   )
   54                   SPRING (  "   /   "   )
   56                   SUMMER (  "   /   "   )
        EMPHASIS AREA COURSES:
   58   DSS  (2 = REQD / 1 = ELECTIVE / 0 = NA)
   60   TS   (   "     /       "      /   "   )
   62   ICN  (   "     /       "      /   "   )
   64   CCNO (   "     /       "      /   "   )
```

B) SET 2-COURSE DESCRIPTIONS (SECOND 57 ENTRIES)
(EACH ENTRY CONSISTS OF A 10 LINE BLOCK)

COL(S)	CONTENTS
1-73	COURSE NUMBER, NAME, LECTURE/LAB HOURS, DESCRIPTION, PREREQUISITES

****

INFORMATION STORES:

1. DATABASE - initially loaded from the "INPUT FILE" (see data sources) with course data and the preset matrix. DB is changed when the user modifies the schedule during program execution. Also contains minimum hour accounting variables, term to quarter correlators, and emphasis area selection variables.

****

****

TRANSACTION CENTERS:

1. L - see LIST MENU SWITCH

2. LIST MENU SWITCH - called from the "MAIN MENU SWITCH" to display menu options and transfer lister menu selections to appropriate lister procedures.

3. MAIN MENU SWITCH - procedure to call the "MAIN MENU DISPLAY" (see TRANSFORMS) and transfer menu option selections to appropriate procedures

****

TRANSFORMS:

1. A - see ADD_A_COURSE

2. ADD_A_COURSE - procedure called from the "MAIN MENU SWITCH"(see TRANSACTION CENTERS). allows the user to add a course to his schedule

3. AS - see LISTAS

4. CS - see LISTCS

5. D - see DROP_A_COURSE

6. DESCRIBE - procedure called from "LISTER SWITCH" (see TRANSACTION CENTERS) to list selected course descriptions

7. DISPLAY_MENU - called from "MAIN MENU SWITCH" (see TRANSACTION CENTERS) to display the menu on the terminal screen. the display will remain on the screen until a menu selection is made

8. DROP_A_COURSE - procedure called from the "MAIN MENU SWITCH"(see TRANSACTION CENTERS). allows the user to remove a course from his schedule

9. E - see EMPHASIS_AREA

10. EMP CHECK - called from "UPDATE/SHOW" to see if an emphasis area has been selected and if so, to tell the user if the required emphasis course or any emphasis electives need to be scheduled

11. GET_DATA - procedure to draw data from the "INPUT FILE" (see DATA SOURCES) and place it in the "DATABASE" (see INFORMATION STORES)

12. GUIDANCE - called from "MAIN MENU SWITCH" (see TRANSACTION CENTERS) to display help data and general information about the program

13. L3 - see LIST3

14. L4 - see LIST4

15. LA - see LISTALL

16. LD - see DESCRIBE

17. LE - see LISTEMP

18. LI - see LISTIND

19. LIST3 - procedure called from "LISTER SWITCH" (see TRANSACTION CENTERS) to list all 3000 level courses in the "DATABASE"

20. LIST4 - procedure called from "LISTER SWITCH" (see TRANSACTION CENTERS) to list all 4000 level courses in the "DATABASE"

21. LISTALL - procedure called from "LISTER SWITCH" (see TRANSACTION CENTERS) to list all courses in the "DATABASE"

22. LISTAS - procedure called from "LISTER SWITCH" (see TRANSACTION CENTERS) to list all Admin Science courses in the "DATABASE"

23. LISTCS - procedure called from "LISTER SWITCH" (see TRANSACTION CENTERS) to list all Computer Science courses in the "DATABASE"

24. LISTEMP - procedure called from "LISTER SWITCH" (see TRANSACTION CENTERS) to list all emphasis area courses in the "DATABASE"

25. LISTIND - procedure called from "LISTER SWITCH" (see TRANSACTION CENTERS) to list individual courses in the "DATABASE"

26. LIST_REQUIRED_COURSES - procedure called from "LISTER SWITCH" (see TRANSACTION CENTERS) to list all required courses in the "DATABASE"

27. LN - see NAMES

28. LR - see LIST_REQUIRED_COURSES

29. MATCH_TERM_TO_QTR - procedure to determine when the student's first term is so that term numbers can be corrolated to academic quarters (e.g. term 1 = fall, term 2 = winter, etc.)

30. MIN HRS CHECK - procedure called from "UPDATE/SHOW" to check if there are deficiencies in scheduling AS,CS, graduate level and 4000 level courses. Also checks to see if enough courses have been scheduled per term. Informs the user of any deficiencies.

31. NAMES - procedure called from "LISTER SWITCH" (see TRANSACTION CENTERS) to list selected course descriptions

32. PICK_A_NEW_TERM - called from "ADD" when a user tries to add a course in a term that it is not offered in (according to the "DATABASE"). allows the user to override the "DATABASE".

33. PREREQ CHECK - called from the "MAIN MENU SWITCH" (see TRANSACTION CENTERS) to check all scheduled course prerequisites and give the status to the user.

34. EMPHASIS_AREA - called from the "MAIN MENU SWITCH" (see TRANSACTION CENTERS) to allow the student select one of four offered emphasis areas. this keys the program as to which courses to check in obtaining emphasis area requirements fulfillment.

35. SKEDULER - interactive, terminal oriented, menu driven program to aid CSM students in course selection and scheduling.

36. U - see Update_Show

37. UPDATE/SHOW - called from the "MAIN MENU SWITCH" (see TRANSACTION CENTERS) to update the users schedule and give him the status of minimum requirements fulfillment. this module calls other modules to help accomplish this task (i.e. MIN HRS CHECK, EMP CHECK, PREREQ CHECK)

38. VALIDATE - called from the "MAIN MENU SWITCH" (see TRANSACTION CENTERS). allows the user to indicate which courses have been validated. This allows those those courses to count as prerequisites while not appearing on the schedule. at the end of validation, gives the user a summary of validated courses.

****

****

DATA FLOWS (INPUT):

1. COURSE # - a six character (2 alpha, 4 numeric) input string from the keyboard to list a course # in response to questions from the "VALIDATE","ADD", "DROP", "LISTIND", and "DESCRIBE" transforms.

2. EMPHASIS AREA OPTION SELECTIONS -
   - "C" - character input from the keyboard to select emphasis area Computer Center and Network Operations in response to "EMP AREA OPTION MENU" (see DATA FLOWS (output))
   - "I" - character input from the keyboard to select emphasis area Information and Computer Networks in response to "EMP AREA OPTION MENU" (see DATA FLOWS (output))
   - "T" - character input from the keyboard to select emphasis area Tactical Systems in response to "EMP AREA OPTION MENU" (see DATA FLOWS(output))
   - "D" - character input from the keyboard to select emphasis area Decision Support Systems in response to "EMP AREA OPTION MENU" (see DATA FLOWS (output))

3. ENTER QTR OF FIRST TERM - character input from the keyboard in response to the question "which academic quarter is your first term in?" (see DATA FLOWS (output)).

4. EXECUTE SKEDULER - "PW SKEDULER" entered to execute the program

5. LIST MENU SELECTIONS - responses to List Menu Options
   - "Q" - character input from the keyboard to stop listing and return to the main menu
   - "A" - character input from the keyboard to see all

Admin Science courses. activates "LISTAS" (see TRANSFORMS)

"C" - character input from the keyboard to see all Computer Science courses. activates "LISTCS" (see TRANSFORMS)

"3" - character input from the keyboard to see all 3000 level courses. activates "LIST3" (see TRANSFORMS)

"4" - character input from the keyboard to see all 4000 level courses. activates "LIST4" (see TRANSFORMS)

"E" - character input from the keyboard to see all Emphasis Area courses. activates "LISTEMP" (see TRANSFORMS) (see also LIST EMPHASIS AREA OPTION SELECTIONS above)

"R" - character input from the keyboard to see all required courses. activates "LISTREQ" (see TRANSFORMS)

"I" - character input from the keyboard to see info on an individual course. activates "LISTIND" (see TRANSFORMS)

"N" - character input from the keyboard to see all course names. activates "NAMES" (see TRANSFORMS)

"D" - character input from the keyboard to see description of an individual course. activates "DESCRIBE" (see TRANSFORMS)

6. MAIN MENU SELECTIONS - keyboard responses to Main Menu Options to select routing to an appropriate TRANSFORM

"H" - character input to select "GUIDANCE"

"V" - character input to select "VALIDATE"

"A" - character input to select "ADD"

"D" - character input to select "DROP"

"E" - character input to select "SELECT EMP AREA"
"L" - character input to select "LISTER SWITCH"
"U" - character input to select "UPDATE/SHOW"
"P" - character input to select "PREREQ CHECK"
"Q" - character input to terminate execution

7. SELECT EMP AREA TO LIST - keyboard responses to "LIST EMP AREA MENU" (see DATA FLOWS (output))
   "C" - character input to see emphasis area
   Computer Center and Network Operations
   "I" - character input to see emphasis area
   Information and Computer Networks
   "T" - character input to see emphasis area
   Tactical Systems
   "D" - character input to see emphasis area
   Decision Support Systems

8. SUB-MENU RESPONSES - all other input data flows not covered in the other fundamental model inputs

9. TERM # TO ADD - character input (1,2,3,4,5, or 6) from the keyboard in response to the following question from "ADD" TRANSFORM:
   "what term do you want to add this course in?"

10. YES/NO - character input from the keyboard in response to any yes/no question

****

****

DATA FLOWS (OUTPUT):

1. ADD ANOTHER? - terminal screen output asking the user if he wants to add another course. requires a yes/no response.

2. ADD COURSES NOW? - ask the user if he wants to add any of the emphasis area courses now

3. ADD IN ANOTHER TERM? - ask the user if he wishes to change his mind regarding his term selection.

4. ALL OK - tell the user that all course prerequisites have been scheduled properly

5. ALREADY SCHEDULED, MOVE? - tell the user he has asked to add a course that is already on the schedule and that if he adds it, the program will move the course to the location of his latest choice.

6. ASK FOR COURSE # TO SEE - terminal screen output resulting from LIST MENU OPTION SELECTION "I". (see DATA FLOWS (input))

7. COURSE # - terminal screen output resulting from LIST MENU OPTION SELECTION "D" asking for the # of the course description to see.

8. CRS VALIDATED, STILL ADD? - tell the user he has asked to add a course that he previously validated. ask if that is his intention.

9. CRS WILL STAY, AGAIN? - tell the user he has cancelled his drop request and ask if he wishes to drop another course.

10. DROP ANOTHER? - terminal screen output asking the user if he wants to drop another course. (y/n response)

11. ELECTIVES NEEDED - tell if enough emphasis area electives have been scheduled

12. EMP AREA OPTIONS - terminal screen output menu that requires a single character response (C/I/T/D). related to "SEL EMP AREA" TRANSFORM.

13. HELP & GENERAL INFO - terminal scrren output in response to user selection of Main Menu Option "H". tells the user about the program

14. INPUT MUST BE 1,2,3,4,5,6 - tell the user his term selection must be numeric between 1 and 6.

15. LATE/CONCURRENT PREREQUISITES - tell the user which prerequisites are not scheduled or are scheduled concurrently with the master course

16. LIST ALL 3000 LEVEL COURSES - terminal screen output resulting from LIST MENU OPTION selection "3".

17. LIST ALL 4000 LEVEL COURSES - terminal screen output resulting from LIST MENU OPTION selection "4".

18. LIST ALL ADMIN SCIENCE COURSES - terminal screen output resulting from LIST MENU OPTION selection "A".

19. LIST ALL COMPUTER SCIENCE COURSES - terminal screen output resulting from LIST MENU OPTION selection "C".

20. LIST ALL COURSE #s AND NAMES - terminal screen output resulting from LIST MENU OPTION selection "N".

21. LIST ALL COURSES IN DATABASE - terminal screen output resulting from LIST MENU OPTION selection "B".

22. LIST ALL REQUIRED COURSES - terminal screen output resulting from LIST MENU OPTION selection "R".

23. LIST MENU OPTIONS - terminal screen output to show the user listing options. (single character response)

24. LISTEMP OPTIONS - terminal screen output resulting from LIST MENU OPTION selction "E". displays a menu of emp area options to look at. (C/I/T/D)

25. MAIN MENU OPTIONS - terminal screen output to show the user his options in operating the program. requires a single character response.

26. LIST NOW? - ask the user if he wants to see the courses available in his selected emphasis area

27. NOT OFFERED WHEN REQ'D - tell the user he has asked to add the course in a term that it is not offered (according to the data base).

28. NOT ON FILE - terminal screen output response that appears whenever the user enters a course # for validation, adding, dropping, or listing that is not resident in the "DATABASE"

29. NOT ON SCHEDULE - tell the user that the course he has asked to drop is not on the current schedule

30. OVER-RIDE THE DATA BASE? (Y/N) - tell the user he can over-ride the data base and add a course in a term not listed as valid

31. REQD CRS, STILL DROP? - tell the user he is about to drop a required course and ask him if he still wants to do it.

32. REQD EMP CRS NEEDED - tell if the emphasis area required course has been scheduled

33. SEE MORE? - terminal screen output asking the user if he wants to get a description of another course.

34. SHOW AREA SELECTED - show the user the title of the emphasis area he has selected

35. SHOW COURSE DESCRIPTION - terminal screen output resulting from course # input within LISTER module

36. SHOW COURSES ADDED/DROPPED - terminal screen output showing which courses have been added or dropped from the most recent request

37. SHOW CUMULATIVE HOURS - lists total hours scheduled in the following catagories:
    1. AS hours
    2. CS hours
    3. grad level hours
    4. 4000 level hours
    5. total hours

38. SHOW IF EMP AREA SELECTED - tell if emphasis area has not been selected.

39. SHOW SCHEDULED COURSES - activated from "Update_Show" TRANSFORM. Shows courses scheduled by term.

40. SHOW SELECTED AREA COURSES - terminal screen output appearing in response to EMPHASIS LIST MENU option selctions:
    "C" - courses for Computer Center and Network Operations
    "I" - courses for Information and Computer Networks
    "T" - courses for Tactical Systems
    "D" - courses for Decision Support Systems

41. SHOW SELECTED COURSE DATA - terminal screen output resulting from course # input in selecting an individual course to list.

42. SHOW STATUS OF MIN HRS REQ'MTS - tells if enough hours have been scheduled in AS, CS, grad level, 4000 level and if enough courses have been scheduled per term to meet minimum requirements

43. SHOW VALIDATED COURSES - terminal screen output that lists all validated courses. appears after a validation session and during schedule update.

44. SHOW WHEN OFFERED - show the user (by term and academic qtr) when his selected course is offered.

45. STATUS OF REQD CRS - Tell if all required courses are scheduled or validated.

46. SUB-MENU QUESTIONS AND DISPLAYS - all output data flows not covered in the other fundamental model outputs.

47. UNSCHEDULED PREREQUISITES - tell the user when missing prerequisites must be scheduled (by term)

48. VALIDATE ANOTHER COURSE? - terminal screen output asking the user if he wants to validate another course.(y/n)

49. WELCOME, WHAT QTR IS 1ST TERM IN? - terminal screen output asking for data to use in corrolating student term # to academic quarter.

50. WHAT QTR IS FIRST TERM IN - terminal screen output seen upon program execution. the response will be used to corrolate student terms (1-6) to academic quarters.

51. WHICH COURSE TO ADD/DROP? - terminal screen output asking the user which course to add or drop. requires a 6 character (2 alpha, 4 numeric) response.

52. WHICH COURSE TO VALIDATE - terminal screen output that appears when "VALIDATE" TRANSFORM is entered. requires a 6 character (2 alpha, 4 numeric) response.

****

****

DATA FLOWS (INTERNAL):

1. 3 -(from LIST MENU SWITCH)- control data to call LIST3
2. 4 -(from LIST MENU SWITCH)- control data to call LIST4
3. A -(from LIST MENU SWITCH)- control data to call LISTAS
4. A -(from MAIN MENU SWITCH)- control data to call ADD_A_COURSE
5. B -(from LIST MENU SWITCH)- control data to call LISTALL
6. C -(from LIST MENU SWITCH)- control data to call LISTCS
7. CALL - internal control linkage from superordinate modules to call subordinate modules based on sequence or input from the keyboard
8. COURSE DATA (AND DESCRIPTIONS) - see "INPUT FILE" DATA SOURCE
9. D -(from LIST MENU SWITCH)- control data to call DESCRIBE
10. D -(from MAIN MENU SWITCH)- control data to call DROP_A_COURSE
11. E -(from LIST MENU SWITCH)- control data to call LISTEMP
12. E -(from MAIN MENU SWITCH)- control data to call EMPHASIS_AREA
13. EMPHASIS AREA SELECTIONS - this code is stored in the "DATABASE" to show which emphasis area has been selected. used in determining if the required or elective emphasis area courses have been scheduled
14. H -(from MAIN MENU SWITCH)- control data to call GUIDANCE

15. I -(from LIST MENU SWITCH)- control data to call LISTIND

16. L -(from MAIN MENU SWITCH)- control data to call LISTER

17. N -(from LIST MENU SWITCH)- control data to call NAMES

18. P -(from MAIN MENU SWITCH)- control data to call PREREQUISITE_CHECK

19. R -(from LIST MENU SWITCH)- control data to call LIST_REQUIRED_CRS

20. STUDENT CORROLATION DATA - academic quarters are assigned to term #s and loaded to the "DATABASE" for later use in course selection. Two options are available:

TERM	OPTION 1	OPTION 2
1	fall	spring
2	winter	summer
3	spring	fall
4	summer	winter
5	fall	spring
6	winter	summer

21. U -(from MAIN MENU SWITCH)- control data to call UPDATE_SHOW

22. V -(from MAIN MENU SWITCH)- control data to call VALIDATE

****

APPENDIX E

USER'S GUIDE

TABLE OF CONTENTS

****

1.

INTRODUCTION

This program is an interactive, terminal oriented, menu driven software package designed to aid CSM students in course selection and scheduling. The program provides each student with a preset schedule that contains all required courses. The student must build on that schedule when selecting emphasis area courses. The program will keep track of all prerequisites, validated courses, graduation requirements, tentative offering times and emphasis area requirements. The program will prevent the student from making scheduling errors by continuously conducting requirements checks and alerting the student to actual or potential problems. Upon completion of each SKEDULER session, the program will provide the student with a complete academic schedule that can be saved and transmitted either electronically or by hard copy.

****

2.

REQUIREMENTS

This program will be located on each students A-disk for his/her individual use.

****

****

3.

PRIOR TO EXECUTION

Due to the size of the program, storage must be increase prior to execution. While in CMS, enter:

```
DEFINE STORAGE 1M
```

You will see the following after entered:

```
define storage 1m
STORAGE = 01024 K
CP ENTERED; DISABLED WAIT PSW '00020000 00000000'
```

Now you must reenter CMS by typing the following:

```
I CMS
```

After entry you will see the following:

```
i cms
CMS 2.1 - 10/19/84
```

Now you are ready to execute the program.

****

****

4.

TO EXECUTE THE PROGRAM

To execute "SKEDULER" simply enter the following:

PW SKEDULER

You will see the following:

Execution begins...

```
**************************************
*   ****************************   *
*   *   WELCOME TO "SKEDULER"    *   *
*   ****************************   *
**************************************
```

WHAT QTR OF THE YEAR IS YOUR FIRST TERM IN?

ENTER "F" FOR FALL (OCT-DEC)
ENTER "S" FOR SPRING (APR-JUN)

Enter "f" or "s" here. Any other entry will cause the question to reappear. A correct entry will lead you to the Main Menu.

****

****

5.

MAIN MENU

The main menu will appear as shown below after responding to the opening question and following completion of any of the main menu functions.

```
******************** MAIN MENU ************************
*                                                      *
*   ENTER "H" FOR HELP AND GENERAL INFORMATION         *
*   ENTER "V" TO VALIDATE A COURSE                     *
*   ENTER "A" TO ADD  A COURSE TO   THE SCHEDULE       *
*   ENTER "D" TO DROP A COURSE FROM THE SCHEDULE       *
*   ENTER "E" TO SELECT AN EMPHASIS AREA               *
*   ENTER "L" TO LIST COURSES AVAILABLE                *
*   ENTER "U" TO SEE YOUR UPDATED SCHEDULE AND         *
*             TO SEE YOUR STATUS ON FULFILLMENT        *
*             OF MINIMUM REQUIREMENTS                  *
*   ENTER "P" TO SEE IF PREREQUISITES HAVE BEEN MET    *
*   ENTER "Q" TO QUIT                                  *
*                                                      *
******************** MAIN MENU ************************
```

5.1

MAIN MENU SELECTION H

ENTER "H" FOR HELP AND GENERAL INFORMATION
An "h" will cause the following information to appear:

Debug? - If this should appear in the top left corner of your screen , you have made an input error that has terminated the program.
Enter "q" (without quotes) to exit the debug routine and re-enter CMS.

MORE...- If this should appear in the lower right corner of your screen, you must depress the "ALT" key and the "PA2" key (or the "CLEAR" key) simultaneously to see the next screen of information.
NEVER try to enter data when this signal is on your screen: it WILL terminate the program.

THIS PROGRAM IS DESIGNED TO HELP COMPUTER SYSTEM MGMT STUDENTS (CURRIC #367) PREPARE THEIR ACADEMIC SCHEDULES. EACH STUDENT IS PROVIDED WITH A PRESET SCHEDULE THAT CONTAINS ALL REQUIRED COURSES. THE STUDENT MUST BUILD ON THAT SCHEDULE IN ORDER TO MEET MINIMUM GRADUATION REQUIREMENTS:

CATEGORY	MINIMUM
ADMIN SCIENCE HOURS	24
COMPUTER SCIENCE HOURS	16
GRADUATE LEVEL HOURS	48
4000 LEVEL HOURS	12 (OF 48 GRAD)
COURSES PER TERM (1-3)	4
" " " (4-6)	3

PLUS:

1. SCHEDULE OR VALIDATE ALL REQUIRED COURSES
2. SELECT AN EMPHASIS AREA WITH:
    A. ONE REQUIRED COURSE
    B. THREE ELECTIVES

THIS MUST ALL BE DONE KEEPING IN MIND THAT ALL COURSES ARE NOT OFFERED EVERY QUARTER. FURTHERMORE, COURSE PREREQUISITES MUST BE SCHEDULED OR VALIDATED.

THIS PROGRAM WILL KEEP TRACK OF ALL THESE REQUIREMENTS FOR YOU AND WILL ALLOW YOU TO CREATE ANY SCHEDULE YOU DESIRE (WITHIN DATABASE LIMITATIONS).

TO OBTAIN A HARD COPY OF SCHEDULE CREATED:
A COPY OF THE LATEST ENTIRE SESSION ON "SKEDULER" WILL BE RESIDENT ON YOUR A-DISK UNDER THE FILE "SKEDULER LISTING". THAT FILE CAN BE EDITED IN XEDIT AND PRINTED ON THE VM PRINTER. IF YOUR LAST SESSION WAS OF CONSIDERABLE LENGTH, YOU MAY HAVE TO "DEFINE STORAGE 1M" PRIOR TO GOING INTO XEDIT OR YOU WILL BE TOLD THAT YOUR LISTING FILE IS TOO LARGE.

At the end of these displays, entering "ALT PA2" will return you to the main menu.

5.2

MAIN MENU SELECTION V

ENTER "V" TO VALIDATE A COURSE

A "v" will cause the following statement to appear:

ENTER THE SIX CHARACTER CODE OF THE COURSE TO VALIDATE

This refers to the two-letter course code and the four-digit course number (e.g. IS2000, MN4105, etc.). An incorrect entry or an entry for a course not resident in the database will bring about the following response:

XXXXXX IS NOT LOCATED IN THE DATABASE.
CHECK FOR INPUT ERROR

DO YOU WISH TO VALIDATE ANY OTHER COURSES?
ENTER Y FOR YES / ANY OTHER CHARACTER FOR NO

A proper entry will simply show the following:

DO YOU WISH TO VALIDATE ANY OTHER COURSES?
ENTER Y FOR YES / ANY OTHER CHARACTER FOR NO

A "yes" response will generate a request for more input
A "no" response will show the following:

VALIDATED COURSES **********

IS2000(example entry)

At this point, "ALT PA2" will take you back to the Main Menu.

5.3

MAIN MENU SELECTION A

ENTER "A" TO ADD A COURSE TO THE SCHEDULE
An "a" will cause the following statement to appear:

ENTER THE SIX CHARACTER CODE OF THE COURSE TO ADD

This refers to the two-letter course code and the four-digit course number (e.g. IS2000, MN4105, etc.). An incorrect entry or an entry for a course not resident in the database will bring about the following response:

XXXXXX IS NOT LOCATED IN THE DATABASE
DO YOU WANT TO ADD ANOTHER COURSE?
ENTER "Y" FOR YES, ANY OTHER FOR NO

A proper response for a course that is already on the current schedule will show the following:

XXXXXX IS ALREADY SCHEDULED IN TERM X
ADDING THIS COURSE WILL REMOVE IT FROM
THE CURRENT SCHEDULE LOCATION.
DO YOU STILL WANT TO ADD IT? (Y/N)

A proper entry for an unscheduled course or a "yes" response to the above question will show the following (as an example):

XXXXXX IS OFFERED IN THE /WINTER (2 & 6)//SPRING (3)/
WHAT TERM (#) DO YOU WISH TO SCHEDULE XXXXXX IN?

This question requires a response of 1,2,3,4,5 or 6. Any other response will bring about the following statement and question:

SORRY, INPUT MUST BE 1,2,3,4,5 OR 6

WHAT TERM (#) DO YOU WISH TO SCHEDULE XXXXXX IN?

The example above showed the course offered in terms 2,3 and 6. A correct numerical response (1-6) that is within the set of numbers offered by a specific course will generate the following:

XXXXXX HAS BEEN ADDED TO YOUR SCHEDULE

DO YOU WANT TO ADD ANOTHER COURSE?
ENTER "Y" FOR YES, ANY OTHER FOR NO

A correct numerical response (1-6) that is not within the set of numbers offered by a specific course will generate the following:

SORRY, XXXXXX IS NOT OFFERED IN THE (QUARTER)

DO YOU WISH TO SCHEDULE IT IN ANOTHER TERM?
ENTER "Y" FOR YES, ANY OTHER CHARACTER FOR NO

A "yes" response will generate the following question:

WHAT TERM (#) DO YOU WISH TO SCHEDULE XXXXXX IN?

A "no" response will generate the following:

IF YOU HAVE LEARNED THAT THE DATABASE IS NOT CORRECT AND THAT THIS COURSE WILL BE OFFERED AS PER YOUR REQUEST, YOU MAY SCHEDULE IT ACCORDINGLY.

IF THIS IS THE CASE, AND YOU WANT TO SCHEDULE
THE COURSE AS ORIGINALLY REQUESTED,ENTER "Y".
ENTER ANY OTHER CHARACTER FOR NO.

A "yes" response will add the course to your schedule.
A "no" response will generate the question of continuation:

DO YOU WANT TO ADD ANOTHER COURSE?
ENTER "Y" FOR YES, ANY OTHER FOR NO

A "yes" response will generate the question "which course to add"?
A "no" response will take you back to the Main Menu.

5.4

MAIN MENU SELECTION D

ENTER "D" TO DROP A COURSE FROM THE SCHEDULE
A "d" will cause the following statement to appear:

ENTER THE SIX CHARACTER CODE OF THE COURSE TO DROP

This refers to the two-letter course code and the four-digit course number (e.g. IS2000, MN4105, etc.). An incorrect entry or an entry for a course not resident in the database will bring about the following response:

XXXXXX IS NOT LOCATED IN THE DATABASE

DO YOU WANT TO DROP ANOTHER COURSE?
ENTER "Y" FOR YES, ANY OTHER CHARACTER FOR NO

A proper response for a course that is not on the current schedule will show the following:

XXXXXX IS NOT ON THE CURRENT SCHEDULE

DO YOU WANT TO DROP ANOTHER COURSE?

A proper response for a course that is "required" will show:

XXXXXX IS A REQUIRED COURSE
DO YOU STILL WISH TO DROP IT?
ENTER "Y" FOR YES, ANY OTHER FOR NO

A "yes" at this point will show the following:

XXXXXX HAS BEEN DROPPED FROM THE SCHEDULE

A "no" will show you this:

XXXXXX WILL REMAIN ON THE SCHEDULE

DO YOU WANT TO DROP ANOTHER COURSE?
ENTER "Y" FOR YES, ANY OTHER CHARACTER FOR NO

A proper response for a non-required course that is on the current schedule will show you the following:

XXXXXX HAS BEEN DROPPED FROM THE SCHEDULE

DO YOU WANT TO DROP ANOTHER COURSE?
ENTER "Y" FOR YES, ANY OTHER CHARACTER FOR NO

A "yes" response will generate the question "which course to drop"?
A "no" response will take you back to the Main Menu.

5.5

MAIN MENU SELECTION E

ENTER "E" TO SELECT AN EMPHASIS AREA

An "e" will cause the following menu to appear:

```
************ SELECT EMPHASIS MENU ***************
*                                                 *
*  SELECT AN EMPHASIS AREA:                       *
*                                                 *
*  ENTER "C" COMPUTER CENTER AND                  *
*                              NETWORK OPERATIONS *
*  ENTER "I" INFORMATION AND COMPUTER NETWORKS    *
*  ENTER "T" TACTICAL SYSTEMS                     *
*  ENTER "D" DECISION SUPPORT SYSTEMS             *
*                                                 *
************ SELECT EMPHASIS MENU ***************
```

An improper response to this menu will merely cause the same menu to reappear until a proper resonse is entered. A proper response will generate the following statement and question:

YOU HAVE SELECTED "XXXXX XXXXX" AS YOUR EMPHASIS AREA

DO YOU WANT TO LIST EMPHASIS AREA COURSES NOW? (Y/N)

A "yes" response at this point will take you to the "list" routine, followed by the question below.

A "no" response will immediately generate the following question:

DO YOU WANT TO ADD EMPHASIS AREA COURSES NOW? (Y/N)

A "yes" response here will take you into the "add a course" routine and then return you to the Main Menu. A "no" response will immediately return you to the Main Menu.

5.6

MAIN MENU SELECTION L

ENTER "L" TO LIST COURSES AVAILABLE

An "1" will cause the following menu to appear:

```
***************** LIST MENU *****************
*                                             *
*  ENTER:                                     *
*   "Q" TO QUIT LISTING                       *
*   "A" TO SEE ALL ADMIN SCIENCE COURSES      *
*   "C" TO SEE ALL COMPUTER SCIENCE COURSES   *
*   "3" TO SEE ALL 3000 LEVEL COURSES         *
*   "4" TO SEE ALL 4000 LEVEL COURSES         *
*   "E" TO SEE ALL EMPHASIS AREA COURSES      *
*   "R" TO SEE ALL REQUIRED COURSES           *
*   "I" TO SEE DATA ON AN INDIVIDUAL COURSE   *
*   "B" TO SEE ALL COURSES IN THE DATA BASE   *
*   "N" TO SEE ALL COURSE "NAMES/TITLES"      *
*   "D" TO SEE COURSE DESCRIPTIONS            *
*                                             *
***************** LIST MENU *****************
```

5.6.1/.2/.3/.4/.5/.6

LIST MENU SELECTION ----------

Character entries of A,C,3,4,R & B are self explainatory. These entries will generate screen output in the selected category in the following format:

				(1 = YES / 0 = NO)			
COURSE	HOURS	CURRIC	PREREQ	FALL/WINTER/SPRING/SUMMER			
******	*****	******	******	****	******	******	******
CM3001	4	AS	MN2155	0	0	0	1
CM3002	4	AS	CM3001	1	0	0	0

Following the course listing, ALT PA2 will return you to the listing menu.

5.6.7

LIST MENU SELECTION ----------

An entry of "e" while at the listing menu will generate the following:

SELECT WHICH EMPHASIS AREA COURSES YOU WISH TO LOOK AT:

ENTER:
"C" FOR COMPUTER CENTER AND NETWORK OPERATIONS
"I" FOR INFORMATION AND COMPUTER NETWORKS
"T" FOR TACTICAL SYSTEMS
"D" FOR DECISION SUPPORT SYSTEMS

An improper response at this time will cause the same question to reappear until a proper response is entered. A proper response will show the following for the appropriate area:

YOU HAVE SELECTED "XXXXXX XXXXX"

THE FOLLOWING COURSE IS REQUIRED FOR THIS EMPHASIS AREA:

(1 = YES / 0 = NO)

COURSE	HOURS	CURRIC	PREREQ	FALL	WINTER	SPRING	SUMMER
******	*****	******	******	****	******	******	******
XXXXXX	X	XX	XXXXXX	0	1	0	0

CHOOSE THREE (3) OF THE FOLLOWING COURSES AS ELECTIVES WITHIN THIS EMPHASIS AREA:

COURSE	HOURS	CURRIC	PREREQ	FALL	WINTER	SPRING	SUMMER
******	*****	******	******	****	******	******	******
XXXXXX	X	XX	XXXXXX	0	1	0	1

Following the course listing, ALT PA2 will return you to the listing menu.

5.6.8

LIST MENU SELECTION ----------

An entry of "i" while at the listing menu will generate the following:

ENTER THE SIX CHARACTER CODE OF THE COURSE TO LOOK AT

This refers to the two-letter course code and the four-digit course number (e.g. IS2000, MN4105, etc.). An incorrect entry or an entry for a course not resident in the database will bring about the following response (and return you to the listing menu)

XXXXXX IS NOT LOCATED IN THE DATABASE

A proper response will give you the following information on the appropriate course:

				(1 = YES / 0 = NO)			
COURSE	HOURS	CURRIC	PREREQ	FALL/WINTER/SPRING/SUMMER			
******	*****	******	******	****	******	******	*****
XXXXXX	X	XX	XXXXXX	0	1	0	0

Following the course listing, ALT PA2 will return you to the listing menu.

5.6.9
LIST MENU SELECTION ----------

An entry of "n" while at the listing menu will generate a list of course names in the following format:

```
COURSE   COURSE NAME                    (LECTURE/LAB HOURS)
******   ***********                    ******************

CM3001 - ECON EVAL OF TELECOMM SYSTEMS I ------ (4-0)
CM3002 - ECON EVAL OF TELECOMM SYSTEMS II ----- (4-0)
```

Following the course listing, ALT PA2 will return you to the listing menu.

5.6.10
LIST MENU SELECTION ----------

An entry of "d" while at the listing menu will generate the following:

ENTER THE SIX CHARACTER CODE OF THE COURSE TO LOOK AT

This refers to the two-letter course code and the four-digit course number (e.g. IS2000, MN4105, etc.). An incorrect entry or an entry for a course not resident in the database will bring about the following response (and return you to the listing menu):

XXXXXX IS NOT LOCATED IN THE DATABASE

DO YOU WISH TO SEE ANY OTHER COURSE DESCRIPTIONS?
ENTER Y FOR YES / ANY OTHER CHARACTER FOR NO

A proper response will generate the following type of response:

IS4185 - DECISION SUPPORT SYSTEMS ---------- (4-0)
The application and design of computer-based information systems for management planning, control and operations
PREREQUISITES: MN2155, MN3105, OS3101, IS2000

Following the course description, ALT PA2 will generate the following question:

DO YOU WISH TO SEE ANY OTHER COURSE DESCRIPTIONS?
ENTER Y FOR YES / ANY OTHER CHARACTER FOR NO

A "yes" response will regenerate the question "which course to see?"
A "no" response will return you to the listing menu.

5.6.11
LIST MENU SELECTION ----------

An entry of "q" while at the listing menu will return you to Main Menu

---

5.7

MAIN MENU SELECTION U

ENTER "U" TO SEE YOUR UPDATED SCHEDULE AND TO SEE YOUR STATUS ON FULFILLMENT OF MINIMUN REQUIREMENTS

A "u" will generate the output concerning the following topics:

1) courses scheduled per term (number/name/hours)
2) cumulative statistics on:
    a) admin science hours
    b) computer science hours
    c) graduate level hours (3000 & 4000)
    d) 4000 level hours
    e) total hours
3) have enough courses been scheduled per term
4) validated courses
5) required courses not scheduled
6) is an emphasis area selected?
   if so: a) has the required course been scheduled
          b) have 3 electives been scheduled
7) are all prerequisites met?
    a) if not, when must they be scheduled

At various points throughout the display of this information, you will be required to enter ALT PA2 to see the next screenful of information and to return you to the Main Menu.

SAMPLE OUTPUT FROM MAIN MENU SELECTION U

```

```

5.8

MAIN MENU SELECTION P

ENTER "P" TO SEE IF PREREQUISITES HAVE BEEN MET
A "p" will show you if all prerequisites have been met
and when deficiencies must be scheduled.

ALT PA2 will return you to the Main Menu.

5.9

MAIN MENU SELECTION Q

ENTER "Q" TO QUIT
A "q" terminates the program and show you the following:

```
...execution ends
File 'SKEDULER': 2696 lines; no diagnostics
110497 bytes of object code generated
5611 statements executed
191192 bytes of memory requested during compilation
6496 bytes returned before execution
100680 bytes requested during execution
```

****

****

6.

OBTAINING A HARD COPY OF YOUR SCHEDULE

A copy of your latest session on "SKEDULER" will be resident on your a-disk under the file name "SKEDULER LISTING". That file can be edited in XEDIT and printed on the VM printer. (Remember that you will have to "Define Storage 1m" prior to entering XEDIT.)

APPENDIX G

MODULE DESCRIPTIONS

TABLE OF CONTENTS

MODULE DESCRIPTION

1. NAME: ADD_A_COURSE (ADD)

2. PROSE DESCRIPTION: This module is called by the user by selecting main menu option "A". This module first asks the user which course to add (course #). Lower case input is converted to upper case if necessary. The data base is searched for the selected course. If the course is not found, the user is notified. If the If the course has been validated, the user is notified. He can override the validation and add it back. If the course has been scheduled already, the user is notified. He can override the previous schedule slot and move the course. This module then shows the user when the course is offered (both academic quarter and student term - this is where the "Match_Term_To_Qtr" data is used). This module then asks the user when he wishes to schedule the course. The module determines if the user has asked for the course in a quarter that it is offered (according to the data base). If not, "Pick_A_New_Term" is called in which the user may select a new term or override the data base. After all of these checks, the course is added if the user so desires. Then the user is asked if he wishes to continue adding. If so, the above process is repeated. If not, the user goes back to the main menu.

3. PROCEDURAL DESCRIPTION:

```
Repeat (until thru)
  Ask for input (course #)
  Convert lower case to upper case input
  Search data base for selected course
  If not found then
    Notify the user
```

```
    If found but validated then
      Ask user if he still wants to add
      If no then
        drop to *
    If found but already scheduled then
      Ask user if wants to change the courses location
        on schedule
      If no then
        drop to *
    Show user when course is offered
    Ask which term to add course in
    Read input
    Determine if course is offered when asked for
    If not then
      Call "Pick_A_New_Term"
    Else
      Add the course
  * Ask the user if he wishes to continue adding crs,s
    If no then
      Thru := true
  Until thru
```

4. INTERFACES:

INPUT FROM: MAIN MENU SWITCH (w/in SKEDULER CONTROL)
MATCH_TERM_TO_QTR (global data)
EMPHASIS_AREA (select)
PICK_A_NEW_TERM (internal to ADD_A_COURSE

OUTPUT TO: SCREEN
PICK_A_NEW_TERM (internal to ADD_A_COURSE

MODULE DESCRIPTION

1. NAME: DESCRIBE

2. PROSE DESCRIPTION: The user can call this module by selecting option "D" on the list menu. The user is then prompted for a course #. Upon proper entry of the course #, the user is shown the full description of the selected course.

3. PROCEDURAL DESCRIPTION:

```
Prompt user for course #
Convert lower case input to upper case
Search data base for entered course #
If found then
  Show description of the selected course
If not found then
  Tell user selected crs is not in the data base
```

4. INTERFACES:

   INPUT FROM: LISTER (List Menu Switch)

   OUTPUT TO: SCREEN

MODULE DESCRIPTION

1. NAME: DROP_A_COURSE (DROP)

2. PROSE DESCRIPTION: This module is called by the user by selecting main menu option "D". This module first asks the user which course to drop (course #). Lower case input is converted to upper case if necessary. The data base is searched for the selected course. If the course is not found, the user is notified. If the course is found but not scheduled, the user is notified. If the course is required, the user is asked if he still wishes to drop it. If so, the course is dropped. If the course is found and not required it is dropped automatically. Then the user is asked if he wishes to continue dropping courses. If so, the above process is repeated. If not, the user goes back to the main menu.

3. PROCEDURAL DESCRIPTION:

```
Repeat (until thru)
  Ask for input (course #)
  Convert lower case to upper case input
  Search data base for selected course
  If found then
    If scheduled then
      If required then
        Ask if user still wants to drop it
        If yes then
          Drop the course (change term code to "0")
      Else
        Drop the course (change term code to "0")
    Else
      Tell the user course not scheduled
  Else
```

```
        Tell the user the course is not in the data base
      Ask the user if he wishes to continue
      If no then
        Thru := true
    Until thru
```

4. INTERFACES:

   INPUT FROM: MAIN MENU SWITCH (w/in SKEDULER CONTROL)

   OUTPUT TO: SCREEN

MODULE DESCRIPTION

1. NAME: EMP_CHECK

2. PROSE DESCRIPTION: This module is called from "Update_Show". Its function is to check if an emphasis area has been selected and if so, to tell the user if the required emphasis area course and sufficient elective emphasis area courses have been scheduled. (a global emphasis area code is assigned within "Emphasis_Area" upon emp area selection - this global variable is checked within this module to determine if an area has been selected)

3. PROCEDURAL DESCRIPTION:

```
Check EMPCODE (global variable)
If blank then
  Tell user no emphasis area has been selected yet
If EMPCODE assigned then
  If emp crs reqd for selected area not scheduled then
    Tell the user
  Count the # of emp area electives scheduled
    If < 3 then
      Tell the user he needs to schedule at least 3
```

4. INTERFACES:

INPUT FROM: UPDATE_SHOW

OUTPUT TO: SCREEN

MODULE DESCRIPTION

1. NAME: EMPHASIS_AREA (select)

2. PROSE DESCRIPTION: This module is called by the user by selecting main menu option "E". The user is shown a menu of options. Upon selection, the EMPCODE (global variable) is set accordingly and the user is asked if he wishes to see emphasis area courses. If so, he is transferred to "Listemp". Upon completion of the list sequence or if he did not desire to see the courses, the user is asked if he wishes to add any courses. If so, he is transferred to the "ADD" module. Upon completion of the add sequence or if he did not wish to add a course, the user goes back to the main menu.

3. PROCEDURAL DESCRIPTION:

```
Show emphasis area option menu
Read user input
Update EMPCODE according to input
Ask to list
  If yes then
    Call "Listemp"
Ask to add
  If yes then
    Call "Add_a_course" (ADD)
```

MODULE DESCRIPTION

1. NAME: LISTALL

2. PROSE DESCRIPTION: The user can call this module by selecting option "B" on the list menu. When this module is called, the user is shown scheduling data on all courses in the data base.

3. PROCEDURAL DESCRIPTION: none

4. INTERFACES:
   INPUT FROM: LISTER (List Menu Switch)

   OUTPUT TO: SCREEN

MODULE DESCRIPTION

1. NAME: LISTAS

2. PROSE DESCRIPTION: The user can call this module by selecting option "A" on the list menu. When this module is called, the user is shown scheduling data on all Admin Science courses.

3. PROCEDURAL DESCRIPTION: none

4. INTERFACES:
   INPUT FROM: LISTER (List Menu Switch)

   OUTPUT TO: SCREEN

MODULE DESCRIPTION

1. NAME: LISTCS

2. PROSE DESCRIPTION: The user can call this module by selecting option "C" on the list menu. When this module is called, the user is shown scheduling data on all Computer Science courses.

3. PROCEDURAL DESCRIPTION: none

4. INTERFACES:

   INPUT FROM: LISTER (List Menu Switch)

   OUTPUT TO: SCREEN

MODULE DESCRIPTION

1. NAME: LISTEMP

2. PROSE DESCRIPTION: The user can call this module by selecting option "E" on the list menu or by answering appropriate questions from within module "Emphasis Area". When this module is called, the user is shown a menu of emphasis areas from which to choose. Upon selection from that menu, the user is shown the scheduling data on all courses that are required by or used as electives for the chosen emphasis area.

3. PROCEDURAL DESCRIPTION:

```
Repeat (until good)
  Show emphasis area selection menu
  Read input from user
  Error check the input
  If input OK then
    good := true
Until good
Show user appropriate courses based on the input
  INPUT___SHOW
    C     Computer Center and Network Operations
    I     Information and Computer Networks courses
    T     Tactical Systems courses
    D     Decision Support Systems Courses
```

4. INTERFACES:

INPUT FROM: LISTER (List Menu Switch)
EMPHASIS AREA (selection)

OUTPUT TO: SCREEN

MODULE DESCRIPTION

1. NAME: LISTER (LIST MENU SWITCH)

2. PROSE DESCRIPTION: The user can call this module by selecting main menu option "L". When this module is called, the user is shown a Listing Menu from which to select his next move. The user is then routed to the appropriate subroutine based on his list menu option selection. This is a transaction dispatcher module.

3. PROCEDURAL DESCRIPTION:

```
Repeat (until move)
  Repeat (until good)
    Show list menu
    Read selection input
    Error check the above input
    If input OK then
      good := true
  Until good
  Route the user to the appropriate list module
    INPUT___MODULE_____________ACTION
      Q      move := true      leave the listing module
      A      LISTAS            list AS courses
      C      LISTCS            list CS courses
      3      LIST3             list 3000 level courses
      4      LIST4             list 4000 level courses
      E      LISTEMP           list emphasis area crs
      R      LIST_REQUIRED_COURSES
                               list required courses
      I      LISTIND           list an individual crs
      B      LISTALL           list all courses
      N      NAMES             list names of all courses
      D      DESCRIBE          list a course description
Until move
```

NAMES
DESCRIBE

MODULE DESCRIPTION

1. NAME: LISTIND

2. PROSE DESCRIPTION: The user can call this module by selecting option "I" on the list menu. The user is then prompted for a course #. Upon proper entry of the course #, the user is shown the scheduling data on the selected course.

3. PROCEDURAL DESCRIPTION:

```
Prompt user for course #
Convert lower case input to upper case
Search data base for entered course #
If found then
  Show data on the selected course
If not found then
  Tell user selected course is not in the data base
```

4. INTERFACES:

   INPUT FROM: LISTER (List Menu Switch)

   OUTPUT TO: SCREEN

MODULE DESCRIPTION

1. NAME: LIST_REQUIRED_COURSES

2. PROSE DESCRIPTION: The user can call this module by selecting option "R" on the list menu. When this module is called, the user is shown scheduling data on all required courses.

3. PROCEDURAL DESCRIPTION: none

4. INTERFACES:
   INPUT FROM: LISTER (List Menu Switch)

   OUTPUT TO: SCREEN

MODULE DESCRIPTION

1. NAME: MAIN_MENU_DISPLAY

2. PROSE DESCRIPTION: Called from the "Skeduler Control" module to display the main menu options to the user.

3. PROCEDURAL DESCRIPTION: none

4. INTERFACES:
   INPUT FROM: SKEDULER CONTROL

   OUTPUT TO: SCREEN

MODULE DESCRIPTION

1. NAME: MATCH_TERM_TO_QTR

2. PROSE DESCRIPTION: This module takes input from the user to corrolate the student term sequence (i.e. 1-6) to the academic quarter sequence (i.e. fall,winter,spring,summer). This info is used in the "Add" module to show students when courses are offered.

3. PROCEDURAL DESCRIPTION:

Get input from user as to first term
Based on the above input,
assign academic qtrs to student term #s
If 1st term = fall then

TERM	QUARTER
1	FALL
2	WINTER
3	SPRING
4	SUMMER
5	FALL
6	WINTER

If 1st term = spring then

TERM	QUARTER
1	SPRING
2	SUMMER
3	FALL
4	WINTER
5	SPRING
6	SUMMER

4. INTERFACES:

INPUT FROM: SKEDULER CONTROL MODULE

OUTPUT TO: SKEDULER CONTROL MODULE
ADD (via global data)

MODULE DESCRIPTION

1. NAME: MIN_HRS_CHECK

2. PROSE DESCRIPTION: The # of hours scheduled in the following areas (AS, CS, grad, 4000 lvl, total) are passed to this module from "Update_Show". Those hours are compared to standard minimums. Shortages are shown to the user. Shortages in classes scheduled per term are also passed from "Update_Show" and shown to the user in this module.

3. PROCEDURAL DESCRIPTION:

   Compare AS hours scheduled to min AS hours required
   Compare CS hours scheduled to min CS hours required
   Compare grad hours scheduled to min grad hours reqd
   Compare 4000 lvl hours scheduled to min 4000 lvl
   hours required
   Examine # classes per term
   Display all deficiencies to the user

4. INTERFACES:

   INPUT FROM: UPDATE_SHOW

   OUTPUT TO: SCREEN

MODULE DESCRIPTION

1. NAME: NAMES

2. PROSE DESCRIPTION: The user can call this module by selecting option "N" on the list menu. When this module is called, the user is shown the names of all courses in the data base.

3. PROCEDURAL DESCRIPTION: none

4. INTERFACES:

   INPUT FROM: LISTER (List Menu Switch)

   OUTPUT TO: SCREEN

MODULE DESCRIPTION

1. NAME: PICK_A_NEW_TERM (internal to ADD_A_COURSE)

2. PROSE DESCRIPTION: Called fron "ADD_A_COURSE" when the user tries to add a course in term it is not offered (according to the data base). The user is asked if he wishes to change his term selection or if he wishes to override the data base. His choice is then passed to the "ADD" module for appropriate action.

3. PROCEDURAL DESCRIPTION:

```
Ask user if he wishes to change term selection
If no then
  Ask user if he wishes to override the data base
  If yes then
    Notify "Add" to add the course
  If no then
    Notify "Add" to get another term selection
```

4. INTERFACES:

INPUT FROM: ADD_A_COURSE (ADD)

OUTPUT TO: ADD_A_COURSE (ADD)
SCREEN

MODULE DESCRIPTION

1. NAME: PREREQUISITE_CHECK

2. PROSE DESCRIPTION: This module is called automatically when the user updates his schedule (selection "U" on the main menu). It can also be called directly by the user by selecting option "P" from the main menu. This module searches the data base for scheduled courses. As it finds a scheduled course, it examines the prerequisite fields of that course one at a time. If there is an entry in the prereq field this module then increments through the data base again to see if that course has been scheduled and if so, when it is scheduled for. It then notifies the user of any prerequisites that are not scheduled, scheduled concurrent with the master course, or scheduled after the master course.

3. PROCEDURAL DESCRIPTION:

```
Increment through the data base one course at a time
If course is scheduled then
  For X := 1 to 4 do
    If prerequisite #X not scheduled then
      Notify user
    Else
      If term of prerequisite #X >=
                        term of scheduled course then
        Tell user prerequisite scheduled concurrent
                        or too late
```

SCREEN

MODULE DESCRIPTION

1. NAME: UPDATE_SHOW

2. PROSE DESCRIPTION: The user can call this module by selecting option "U" on the main menu. The user is shown all of the courses in his preset schedule and all of the modifications he has made to that schedule. The user is also shown the cumulative hours scheduled in five catagories: Admin Science, Computer Science, Graduate level, 4000 level, and total. This module also shows all validated courses as well as the status of required courses. It then calls three other modules (MIN_HRS_CHECK, EMP_CHECK, PREREQUISITE_CHECK) to display other relevant scheduling data.

3. PROCEDURAL DESCRIPTION:

```
Increment through the data base
Look at scheduled courses only
Count # of AS, CS, 3000 lvl, 4000 lvl hours
Determine if enough classes taken per term
Display scheduled courses by term
Display hours by catagory
Call "Min_Hrs_Check"
Show validated courses
Show status of required courses
Call "Emp_Check"
Call "Prerequisite_Check"
```

4. INTERFACES:

INPUT FROM: MAIN MENU SWITCH (w/in SKEDULE CONTROL)

OUTPUT TO: SCREEN
MIN_HRS_CHECK
EMP_CHECK
PREREQUISITE_CHECK

MODULE DESCRIPTION

1. NAME: VALIDATE

2. PROSE DESCRIPTION: This module is called by the user by selecting main menu option "V". This module begins by asking the user for the course # he wishes to validate. It then convert lower case input to upper case if necessary. Next it searches the data base for the selected course, notifies the user if it is not found and changes the term code to "1" if it is found. Finally, this module asks the user if he wishes to validate any more courses. If so, the above process is repeated. If not, the module shows the user all validated courses.

3. PROCEDURAL DESCRIPTION:

```
Repeat (until thru)
  Ask for course #
  Convert to upper case
  Search data base for course # selected
  If not found then
    notify user
  Else
    change term code to "1"
  Ask user if he wants to continue
  If no then
    Thru := true
Until thru
Show all validated courses
```

4. INTERFACES:

INPUT FROM: MAIN MENU SWITCH (w/in SKEDULER CONTROL)

OUTPUT TO: SCREEN

APPENDIX I

INTEGRATION TEST SPECIFICATION

1. SCOPE

   1.1 "SKEDULER" is an interactive, terminal oriented, menu driven program. Because of these programming objectives, effective use of menus, efficient use of screen space for data display, ease of user interactions, and data examination capabilities are critical functional characteristics that must be present and thoroughly tested.

   1.2 Modules will be integrated using top down and incremental techniques. The top down approach (starting with superordinate modules and working down using stubs) will be used instead of the bottom up approach (starting with the most subordinate modules and working up using drivers) because it provides a preliminary view of the entire program from the very beginning. The incremental approach approach (new modules added one at a time) will be used instead of the phased approach (all modules are combined simultaneously) because it has the advantage of isolating the source of new errors by focusing on the newly added module.

2. TEST PLAN

   2.1 INCREMENTS

      2.1.1 Program Control and Data Base Structure

      2.1.2 Transaction Dispatchers

      2.1.3 Display Format and Generation

      2.1.4 User Interaction

      2.1.5 Data Examination and Display

2.1.6 Module Addition After Program Completion

2.2 OVERHEAD SOFTWARE

2.2.1 Stubs will be required during each increment to fill in the functions required from uncompleted subordinate modules.

2.3 ENVIRONMENT AND RESOURCES

2.3.1 All mechanized testing will be conducted using the IBM 3033 mainframe computer from IBM 3278 terminals.

3. TEST PROCEDURE

3.1 INCREMENT 1 - PROGRAM CONTROL & DATA BASE STRUCTURE

3.1.1 Order of Integration

3.1.1.1 Skeduler Control Module

3.1.1.2 Get Data

3.1.1.3 Match Term To Qtr

3.1.2 Test Case Design - see appendix 5.1

3.1.3 Stubs Required

3.1.3.1 for Skeduler Control Module

3.1.3.1.1 Get Data

3.1.3.1.2 Match Term To Qtr

3.1.3.1.3 Main Menu Switch

3.2 INCREMENT 2 - TRANSACTION DISPATCHERS

3.2.1 Order of Integration

3.2.1.1 Main Menu Switch (w/in Skeduler Control)

3.2.1.2 MAIN Menu Display

3.2.1.3 Lister (List Menu Switch)

3.2.2 Test Case Design - see appendix 5.1

3.2.3 Stubs Required

3.2.3.1 for Main Menu Switch

3.2.3.1.1 Add_A_Course

3.2.3.1.2 Drop_A_Course

3.2.3.1.3 Validate

3.2.3.1.4 Emphasis_Area

3.2.3.1.5 Lister
3.2.3.1.6 Update_Show
3.2.3.1.7 Prerequisite_Check
3.2.3.1.8 Guidance
3.2.3.2 for Lister
3.2.3.2.1 LISTAS
3.2.3.2.2 LISTCS
3.2.3.2.3 LIST3
3.2.3.2.4 LIST4
3.2.3.2.5 LISTEMP
3.2.3.2.6 LIST_Required_Courses
3.2.3.2.7 LISTIND
3.2.3.2.8 LISTALL
3.2.3.2.9 Names

3.3 INCREMENT 3 - DISPLAY FORMAT AND GENERATION
3.3.1 Order of Integration
3.3.1.1 Guidance
3.3.1.2 LIST3
3.3.1.3 LIST4
3.3.1.4 LISTALL
3.3.1.5 LISTAS
3.3.1.6 LISTCS
3.3.1.7 LISTEMP
3.3.1.8 LISTIND
3.3.1.9 List_Required_Courses
3.3.1.10 Names
3.3.2 Test Case Design - see appendix 5.1
3.3.3 Stubs Required - none

3.4 INCREMENT 4 - USER INTERACTION
3.4.1 Order of Integration
3.4.1.1 Emphasis_Area
3.4.1.2 Validate
3.4.1.3 Drop_A_Course
3.4.1.4 Add_A_Course

APPENDIX 5.1

CHART OF MODULE TEST CASES

APPENDIX J

MAINTENANCE MANUAL

1. GENERAL

   1.1 Maintenance is divided into four major activities: corrective maintenance, adaptive maintenance, perfective maintenance,and preventitive maintenance. Corrective maintenance deals with finding the cause of errors and correcting them. Adaptive maintenance modifies software to better fit into its changing environment. Perfective maintenance adds new capabilities and enhances present capabilities. Preventative maintenance changes the software to improve future maintainability and reliability.

   1.2 This manual will deal with adaptive maintenance only; however, the design of the program and the existence of its design documentation will allow all of the maintenance activities to be easily implemented when desired.

2. WHEN CHANGES WILL/MAY BE REQUIRED:

   2.1 WHEN A NEW CATALOG IS ISSUED (ANNUALLY)
      2.1.1 new course descriptions
      2.1.2 new hours breakdown (lecture/lab)
      2.1.3 new prerequisites
      2.1.4 new course name or number

   2.2 WHEN REQUIRED COURSE MATRIX IS MODIFIED (see Curricular Officer)
      2.2.1 addition/deletion of courses
      2.2.2 movement of courses to different terms
      2.2.3 change in number of course required per term

2.3 WHEN EMPHASIS AREA COURSES ARE ADJUSTED
(see Curricular Officer)

2.3.1 change in course required per emphasis area

2.3.2 change in courses allowed as electives per emphasis area

2.4 WHEN COURSE TENTATIVE SCHEDULE IS MODIFIED (see Tentative Course Schedule for annual changes and see Department Heads for changes that occur during the year)

2.4.1 changes to academic quarter offered

3. WHAT CHANGES WILL BE REQUIRED:

3.1 ADDING (DELETING) A COURSE

3.1.1 All course data is listed in 2 sets (see enclosure 1). Each set is in the same sequence (alphabetic by course ID and then numeric be course number). When a course is added (or deleted) corresponding data must be added (deleted) from both sets (i.e. if a course is added in the 4th row of the set 1 sequence, the description must be added in the 4th row of the set 2 sequence - remembering that set 2 is in blocks of 10 rows per entry, the set 2 entry would be made to rows 31-40).

3.1.2 When adding a course, make sure that you add all prerequisites for the course as well.

3.2 CHANGES TO DATA ITEMS IN SET 1 - These changes can be made simply by putting the program/input file into XEDIT and overlaying the old data with the new data.

4. IMPACT OF DATA BASE CHANGES ON THE MAIN PROGRAM

4.1 Most changes can be made without having an impact on the main program. However, due to the screen formatting constraints of PASCAL and the IBM 3278 terminal screen, some changes will require spacing changes within LISTING modules.

4.2 CHANGING THE COURSE NUMBER (col 4-7) - If there is an addition or deletion of a 3000 or 4000 level course, the spacing of LIST3 or LIST4 must be changed also. Adding a course will require the deletion of a trailing WRITELN within the module. Conversely, deletion of a course will require the addition of a trailing WRITELN. This will ensure proper screen format following the listing sequence.

4.3 CHANGING THE CURRICULUM CODE (col 13-14) - If there is an addition or deletion of an AS or CS curriculum code, the spacing of LISTAS or LISTCS must be changed also. Adding a course will require the deletion of a trailing WRITELN within the module. Conversely, deletion of a course will require the addition of a trailing WRITELN. This will ensure proper screen format following the listing sequence.

4.4 CHANGING THE REQUIRED CODE (col 48) - If there is an addition or deletion of a required course code, the spacing of LIST_REQUIRED_COURSES must be changed also. Adding a course will require the deletion of a trailing WRITELN within the module. Conversely, deletion of a course will require the addition of a trailing WRITELN. This will ensure proper screen format following the listing sequence.

4.5 CHANGING THE EMPHASIS AREA CODE (col 58,60,62 or 64)

If there is an addition or deletion of a emphasis area code, the spacing of LISTEMP must be changed also. Adding a course will require the deletion of a trailing WRITELN within the module. Conversely, deletion of a course will require the addition of a trailing WRITELN. This will ensure proper screen format following the listing sequence.

4.6 ADDING OR DELETING ANY COURSE -

If there is an addition or deletion of a course, the spacing of LISTALL and NAME must be changed also. Adding a course will require the deletion of a trailing WRITELN within the modules. Conversely, deletion of a course will require the addition of a trailing WRITELN. This will ensure proper screen format following the listing sequence.

ENCLOSURE 1

STRUCTURE OF "SKEDULER" DATA BASE

1) SET 1 - COURSE DATA (FIRST 57 ENTRIES)

COL(S)	CONTENTS	
1- 2	COURSE ID	
4- 7	COURSE NUMBER	
9	HOURS	
11	TERM ASSIGNED	(PRESET SCHEDULE) (= ACTUAL TERM PLUS 1) (1 = VALIDATED)
